

Malta Robo League is a STEM education program designed for children from 7 to 11 (year 4 to 6) with teams up to 6 members guided by an adult mentor.

Identify a real world problem related to the theme **Our Planet**. Research the problem to develop a possible solution.

Teams build a representation of what they are researching, animating their creation through the use of a robotic kit.

Finally prepare a presentation to share your project with others during MRO!
